Homework 1: Hello Yum!

Due date: September 4, 2015

For this homework, you will create a variant of the HelloWorld program, called `HelloYum`. When this program is run, it will print five lines of output telling who you are and what you like to eat.

Specification

- Name the program `HelloYum` -- This means the class name will be HelloYum and it will be stored in a file called `HelloYum.java`. (Don't put your class in a package.)
- When run, the program must output the following five lines:
  > Andrew ID: <ID>
  > First Name: <name>
  > Last Name: <name>
  > Favorite Restaurant: <name>
  > Best Dish: <name>

  Of course, you will provide your actual ID, names, and favorites in place of the angle brackets.
- Follow the Java Coding Conventions as described in http://www.oracle.com/technetwork/java/javase/documentation/codeconvtoc-136057.html.
- There must be a comment at the beginning of your Java file indicating that you are the author of the file (so this comment must include your first name, last name, and Andrew ID).

Turning-in Your Work

Submit your `HelloYum.java` file using AutoLab (http://autolab.cs.cmu.edu).

Grading

AutoLab will grade your assignment as follows:
- Java file compiles: 10 points
- Output is correct: 75 points
- Follows coding conventions: 10 points
  - We'll deduct one point for each coding convention issue detected.
- Name and Andrew ID in comment at beginning of the Java File: 5 points

AutoLab will show you the results of its grading within approximately one or two minutes of your submission. You may submit multiple times so as to correct any problems with your assignment. Autolab uses the last submission as your grade.
